                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activity such as: Inmune system suppression, Activin/inhibin activity, Chemotactic/Chemokinetic activity haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     09-JUL-2000;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 B
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δõ
The invention relates to isolated polynucleotide (I) and CC polyneptide (II) sequences. (I) is useful as hybridisation probes, CC polynerase chain reaction (PCR) primers, oligomers, and for chromosome CC and gene mapping, and in recombinant production of (II). The CPC polynucleotides are also used in diagnostics as expressed sequence tags CC for identifying expressed genes. (I) is useful in gene therapy techniques CC trestore normal activity of (II) or to treat disease states involving CC (II). (II) is useful for generating antibodies against it, detecting or CC quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful for treating CC diagnostics forensics, gene mapping, identification of mutations in CC diagnostics forensics, gene mapping, identification of mutations comes contents to assess biodiversity.
                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutation diagnostics of genetic disorders or other traits and to assess
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2734
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  2767

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          This sequence represents the Yellow Fever (YF) infectious cDNA clone YFiv5.2/DD. The sequence is derived from the YF 17D strain clone YFiv5 (Rice et al., The New Biologist 1:285-296 (1989)) by the introduction c mutations. The recombinant YF virus is useful as a human vaccine for immunity against YF infection. The recombinant YF virus vaccine is stable and safe, unlike previous vaccines which had pathogenic RNA transcripts or genetically unstable viruses which had the potential to revert back to being pathogenic, or had unacceptable neurovirulence levels when clinically tested. The new modified vaccine retains the characteristics of the current most stable and safe YF vaccine 17-DD, whilst the method for producing the virus prevents loss of immunogenicity seen with high viral passages.

                             prM-E protein deleted, truncated or mutated so that functional yellow fever virus prM-E protein is not expressed and also integrated into the genome of the yellow fever virus a nucleotide sequence encoding a prM-E protein of a second, different flavivirus so that the prM-E protein of the second flavivirus is expressed. The chimeric live, infectious, attenuated virus is used to prepare medicaments for preventing or treating flavivirus infection in a patient. The yellow fever virus vector produces its gene product (tumor antigen or cytokine) in cells of the lymphoid or reticuloendothelial system or in a precursor of these systems in patients with cancer. Flaviviruses replicate in the cytoplasm of cells so that the virus replication does not involve integration of the viral genome into the host cell. The present sequence represents a chimeric DNA derived from yellow fever virus and Japanese encephalitis virus.
 Sequence 10892 BP;
                                                                                                                                                                                                                                                            The invention relates to a chimeric live, infectious, attenuated virus comprising a yellow fever virus with the nucleotide sequence encoding
                                                                                                                                                                                                                                                                                                                                                   Chimeric live, infectious, attenuated yellow fever viruses used for preventing and treating diseases caused by flaviviruses have prM.E nucleotide sequence from a second, different flavivirus as function yellow fever prM·E is not expressed.
                                                                                                                                                                                                                                                                                                                    Disclosure; Page 200-215;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4772
         The present invention is related to a Lactococcus lactis nucleotide sequence (ABA90521) and related proteins (ABB53300-ABB55621). The nucleic acid sequence is useful in the detection and/or amplification nucleic acid sequence, particularly to identify Lactococcus lactis or related species. The proteins of the invention are useful for the biosynthesis or biodegradation of a composition of interest. The

                                                                                                                                                                                                                                                                                                                                    Gorlach J, , Rameaka JG,
                                                                                                                                                                    The invention relates to nucleic acids (I) that hybridise under stringent conditions to any of 999 sequences (ABO65424-ABO66422) or their fragments. (I) are used to express the corresponding polypeptides (II) or to produce genetically modified plant cells or transgenic plants, which may have improved resistance to disease or stress, or altered metabolic/blosynthetic pathways (for production of commercial, nutritional or medicinal products), or generally any trait of interest, or can be used to screen for biologically active agents (e.g. fungicides,
                                                                                                                                      Insecticides and antibiotics).

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the USPTO at segdata.uspto.gov/sequence.html?DocID=999909770149.
                                                                                                                                                                                                                                                                   New nucleic acid that hybridizes to A useful e.g. for preparing transgenic or altered metabolism -

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (1) and (II) can have antibacterial activity and therefore can be used (I) and (II) can have antibacterial activity and therefore can be used (I) waccination. The nucleic acids (I) may be used to produce the CC s. epidermidis polypeptides (II) via the production of vectors (CC containing them which are used to produce hosts cells which express the CC polypeptides. The polypeptides (II) (and/or nucleic acids) may then be used to vaccinate subjects and to raise antibodies against the bacteria. The polypeptides may also be used to assay for other inhibitors of their activity and therefore identify compounds that may be used for the treatment of S. epidermidis infections, e.g. endocarditis. AhH53971 to CC AhH55090 represent specifically claimed S. epidermidis genomic DNA (CC polypucleotide sequences from the present invention. AhH55091 to AhH55098 represent oligonucleotide sequences and primers which are used in the exemplification of the present invention.

CC N.B. The present invention specifically claims all the polynucleotide sequences given in the sequence listing of the present specification, however the sequence listing only goes up to SEQ ID NO:4454 so even though sequences are given in the disclosure for SEQ ID NO:4465 to 4472, no sequences are present for SEQ ID NO:4456 to 4472.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim 8; Page 605-606;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AAH52304 to AAH53970 represent nucleic acids (I) encoding (II), given in AAG81454 to AAG83120, from Staphylococcus (I) and (II) can have antibacterial activity and therefore
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               useful for vaccinating

                        CC (bleb) preparation from a Gram-negative bacterium for use as a vaccine.

CC The blebs of the invention are improved with respect to their considerable of the invention are improved with respect to their considerable of the blebs of the invention are improved with respect to their considerable of the blebs are considerable of the changes to the chromosome of the bacterium from which the blebs are considerable of the changes made include the upregulation of protective antigen considerable of the changes made include the upregulation of protective antigen considerable of the changes which result in detoxification of the chormasses modified Gram-negative bacterial strains from which the bleb considerations are made, a vector suitable for performing recombination consideration of the modified bacterial strains), in the devents (for the generation of the modified bacterial strains), considerable for performing recombination and immunoprotective and non-toxic Gram-negative bleb phost, or killed whole colling the manufacture of a medicament for immunising a human host against a considerable of the influenza virus. Bacterially derived nucleotide sequences of the invention are used in the performance of homologous recombination events up to 1000 by upstream of a bacterial chromosomal gene in order to either increase or decrease expression of that gene. Immunoprotective and concrease or decrease expression of that gene. Immunoprotective and concrease of the present sequence represents a specifically useful colaimed Neisseria meningitidis nucleic acid sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 46; Page 81; 128pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    microbial infections
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    New isolated polynucleotide useful for outer membrane vesicle preparation from Gram-negative bacterial strain for vaccination
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  WPI; 2001-138654/14

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    107
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         87
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 67
```

```
consists of 39 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Caps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          þe
